                                                                           S
                                                                                                                                                                                                               CC polypeptide, nucleic acid and antibody are useful as therapeutics, as particularly in the manufacture of a medicament for treating a syndrome CC associated with a human disease, which includes a pathology associated CC with MOVX polypeptide. The DNA encoding the protein is useful in gene CC with MOVX polypeptide. The DNA encoding the protein is useful in gene CC therapy for treating the disease or condition. In particular, the NOVX CC polypeptide or polynucleotide is useful for treating endocrine/
CC metabolism-related diseases (e.g. obseity or diabetes), central nervous CC system disorders (e.g. Alzheimer's disease, Parkinson's disease, CC epilepsy, multiple sclerosis, schizophrenia or depression), autoimmune CC epilepsy, multiple sclerosis, schizophrenia or depression), autoimmune CC estematory disearers (e.g. sporiasis, allergy, lupus erythematosus, CC asthma, inflammatory bowel disease, rheumatoid arthritis or CC osteoarthritis), cancers (e.g. colon, lung, liver, breast, ovarian, CC osteoarthritis), cancers (e.g. colon, lung, liver, breast, ovarian, CC prostate or brain cancers, or melanoma), liver diseases (e.g. liver CC cirrhosis), lung diseases (e.g. colon, lung, liver, breast, ovarian, CC diseases), lung diseases (e.g. viral, bacterial or parasitio). CC These are also useful in developing powerful assay system for functional CC analysis of various human disorders, as well as in diagnostic capplications, and for monitoring the effects of drugs during clinical trials. This is the amino acid sequence of a novel human NOV protein

                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with mootropic, communosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC system, such as peripheral nervous injuries, peripheral neuropathy and CC alzheimer's, Parkinson's disease, Huntington's diseases, such as CC alzheimer's, Parkinson's disease, Huntington's diseases, such as CC alzheimer's, Parkinson's disease, Huntington's diseases, andotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, CC activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders. Note: The sequence data for this patent did not form CC part of the printed specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
The invention relates to a method of modulating a steroid receptor or a CC process mediated by a steroid receptor in a cell comprising administering CC a polypyridimine tract binding protein-associated splicing factor (PSP) CC polypyridimine tract binding protein-associated splicing factor (PSP) CC polypyridimine tract binding protein-associated splicing factor (PSP) CC polypyridimine tract binding a PSP polypeptide (PSP) CC polypucleotide), an isolated complex of a PSP polypeptide and a steroid receptor (PSP complex) and/or their agonist or antagonist. The invention CC also relates to a method of inhibiting transactivation domains of a steroid receptor in a cell by administering to the cell a PSP complex, and/or their agonist, a method of CC polypeptide, polynucleotide, complex, and/or their agonist, a method of complex antagonist, a method of treating a subject with a condition CC mediated by a steroid receptor or characterized by an abnormality in a steroid receptor signal transduction pathway and/or an abnormal level of interaction between a PSP polypeptide and a steroid receptor by CC disrupting or promoting the interaction in cells or inhibiting or CC promoting the activity of a PSP complex, and a method of preventing or treating a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor or inhibiting. The methods are useful for modulating a steroid receptor or characterized by an accondition mediated by a steroid receptor or characterized by an accondition mediated by a steroid receptor or characterized by an accondition pathway and/or an abnormal level of interaction between a PSP polypeptide and a steroid accondition pathway and/or an abnormal level of interaction between a PSP polypeptide and a steroid condition pathway and/or an abnormal level of interaction between a PSP polypeptide and a steroid condition pathway and/or an abnormal level of interaction between a PSP polypeptide and a steroid condition pathway and/or an abnormal level of interaction betwee
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC receptor. The methods are useful for preventing or treating a condition CC mediated by a steroid receptor in a subject and for evaluating a CC substance for its ability to regulate the onset of labor by reacting a CC PSF polypeptide and a progesterone receptor and a test substance, where CC the PSF polypeptide and receptor bind to form a complex and comparing to CC a control in the absence of the substance to determine if the substance CC and thus regulates the binding of the PSF polypeptide to the receptor CC and thus regulates the onset of labor. The methods are also useful for CC preventing and/or treating pre-term labor, for inducing labor in a CC progesterone receptor, for modulating the onset of labor, for preventing or treating the onset of labor, for preventing or pre-term or premature labor, for stopping labor preparatory to Cesarean delivery or CC premature labor, for stopping labor preparatory to Cesarean delivery or CC controlling the timing of parturition in animals, such as domestic CC animals. This sequence represents a human SFPQ protein used in the scope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc stroid receptor signal transduction pathway and/or an abnormal level of interaction between a PSF polypeptide and a steroid receptor by complex and promoting the interaction in cells or inhibiting or promoting the activity of a PSF complex, and a method of preventing or treating a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor or process mediated by a steroid receptor or individual having a condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor signal transduction pathway and/or an ceptor. The methods are useful for preventing or treating a condition mediated by a steroid receptor in a subject or individual having a condition.

Cc abnormal level of interaction between a PSF polypeptide and a steroid receptor. The methods are useful for preventing or treating a condition mediated by a steroid receptor in a subject and for evaluating a control in the absence of the substance to flabor by reacting to a control in the absence of the substance to determine if the substance of preventing and/or treating pre-term labor, for inducing labor in a subject, for preventing or treating a condition mediated by a progesterone receptor, for modulating the onset of labor. For preventing condition for reducing the order to the receptor of the substance of premature labor, for stopping labor preparatory to Cesarean delivery or for controlling the timing of parturition in animals, such as domestic on timals. This sequence represents a human SFPQ protein used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8×4×4×4×4×4×4×4×8
                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

CC abnormality in a steroid receptor signal transduction pathway and/or an CC abnormality in a steroid receptor signal transduction pathway and/or an CC abnormality in a steroid receptor in a subject and for reacting a condition CC mediated by a steroid receptor in a subject and for evaluating a CC substance for its ability to regulate the onset of labor by reacting a CC PSF polypeptide and a progesterone receptor and a test substance, where CC the PSF polypeptide and receptor bind to form a complex and comparing to CC a control in the absence of the substance to determine if the substance CC stimulates or inhibits the binding of the PSF polypeptide to the receptor and thus regulates the onset of labor. The methods are also useful for CC greventing and/or treating pre-term labor, for inducing labor in a CC subject, for preventing or treating a condition mediated by a CC greterm or premature labor, for reducing the onset of labor, for preventing CC pre-term or premature labor, for reducing the risk of pre-term or premature labor, for preparatory to Cesarean delivery or CC premature labor, for stopping labor preparatory to Cesarean delivery or CC premature labor, for preventing in the onset of labor, such as domestic controlling the thing of parturition in animals, such as domestic controlling the thing of parturition in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC process mediated by a steroid receptor in a cell comprising administering conjugation and a steroid receptor in a cell comprising administering conjugation apolynucleotide encoding a PSF polypeptide (PSF) coplypeptide, a polynucleotide encoding a PSF polypeptide (PSF) coplypeptide (PSF) complex) and/or their agonist or antagonist. The invention collower of the polynucleotide in the invention collower of the polynucleotide in the invention collower of the polynucleotide in a cell by administering to the cell a PSF complex, and/or their agonist. The invention collower of the polynucleotide in a cell by administering to the cell a PSF collower of their agonist, a method of complex in a cell by administering to the cell a PSF collower of their agonist, a method of complex antagonist, a method of treating a subject with a condition complex antagonist, a method of treating a subject with a condition complex antagonist, a method of treating a subject with a condition complex antagonist in a steroid receptor by an abnormality in a steroid receptor signal transduction pathway and/or an abnormal level of complex in a cell by a steroid receptor by administering or complex in the activity of a PSF collower of their agonist or inhibiting or complex and/or their agonist or antagonist. The methods care useful for modulating a steroid receptor by administering a condition mediated by a steroid receptor or process mediated by a steroid receptor or individual having a condition mediated by a steroid receptor or characterized by an analyce and or an anomality in a steroid receptor or characterized by an analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce and or analyce analyce and or analyce and or analyce and or analyce analyce and or analyce an
                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                           immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitys such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
      The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent CC that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying an agent CC expressed in an animal subjected to pain, a method for identifying a compound which regulates CC compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound control of the polynucleotide, a method for more of the polynucleotide, a method for more of the polynucleotide sequence the composition and control of the polynucleotide sequence the composition and control of the polynucleotide sequence the composition and control of the polynucleotide sequence the composition and control of the polynucleotide sequence control of the polynucleotide sequence the composition and control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the polynucleotide sequence control of the control of the control of the control of the control of the control of the contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 12

The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

```

The invention discloses a composition comprising two or more isolated or human polymucleotides or a polymucleotide which represents a fragmu derivative or allelic variation of the nucleic acid sequence. Also

fragment

rat

New composition comprising preparing a medicament for

two or more isolated polypeptides, useful treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent CC that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the color, a method for identifying a CC compound that regulates the activity of one or more of the color, a method for identifying a compound or small molecule that regulates the CC activity in an animal of one or more of the polypeptides given in the CC specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC injury). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed of the printed construction but was obtained in all corrections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal

                                                                                                                                                                                                                                                                                                                              The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleic acid sequence. Also CC comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a CC that is composition, a method for identifying a negent CC that is differentially expressed in an animal subjected to pain an agent CC the expression of the polynucleotide sequence the expressed in an animal subjected to pain, a method for identifying a gent CC compound that regulates the expression of the polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC cativity in an animal of one or more of the polynucleotides given in the generation, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more composition and spared nerve injury (Chung), chronic constriction CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC the specification) which is differentially expressed during pain. Note: The sequence presented is a human protein (shown in Table 2 of the specification, but was obtained in electronic form part of the printed CC specification, but was obtained in electronic form directly from WIPO at figure in the specification, but was obtained in electronic form directly from WIPO at figure in the specification contained (e.g. spene).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Interacts with U5 snRNA, probably by binding to a purine-rich sequence located on the 3' side of U5 snRNA stem 1b. May be involved in a pre-mRNA coupled splicing and polyadenylation process as component of a snRNP-free complex with SNRPA/U1A. The SPPQ-NONO heteromer associated with MATR3 may play a role in nuclear retention of defective RNAs. SPPQ may be involved in homologous DNA pairing; in vitro, promotes the invasion of ssDNA between a duplex DNA and produces a D-loop formation. The SPPQ-NONO heteromer may be involved in DNA unwinding by modulating the function of topoisomerase I/TOP1; in vitro, stimulates dissociation of TOP1 from DNA after cleavage and enhances its jumping between separate DNA helices. The SPPQ-NONO heteromer may be involved in DNA nonhomologous end joining (NHEJ) required for double-strand break repair and V(D) Trecombination and may stabilize paired DNA ends; in vitro, the complex strongly stimulates DNA end joining, binds directly to the DNA substrates and cooperates with the KN70/G22P1-KN80/XRCC5 (KN) dimer to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Biol. Chem. 280:5205-5210(2005) - FUNCTION: DNA- and RNA binding
                                                                                         establish a functional preligation complex. SPPQ is involved in transcriptional regulation. Transcriptional repression is probably mediated by an interaction of SPPQ with SIN3A and subsequent recruitment of histone deacatylases (HDACs). The SFPQ-NONO/SF-1 complex binds to the CYP17 promoter and regulates basal and cAMP-dependent transcriptional avtivity. SPPQ isoform Long binds to the DNA binding domains (DBD) of nuclear hormone receptors, like RXRA and probably THRA, and acts as transcriptional corepressor in absence of hormone ligands. Binds the DNA sequence 5'-CTGAGTC-3'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nuclear processes.   NUCLEOTIDE SEQUENCE.

NUCLEOTIDE SEQUENCE.

Genoscope; Whitehead Institute Centre for Genome Research;
Genoscope; Whitehead Institute Centre for Genome Research;
Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.

-!- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
preliminary data.

-!- FUNCTION: Plays a key role in the control of the eukaryotic cell
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry into S-phase and
cycle. It is required in higher cells for entry which is such a sequence in the cycle.
